Enabling powerful insights

think Analytics, a team of highly professional and experienced procurement analysts who believe in making business analytics simple. Enabling customers to gain powerful insights from their own expenditure data.

We make using expenditure data easy so you can gain Commercial Leverage, reduce Cost of Goods Sold and increase Return on Investment – data is a powerful resource!

Expenditure cube design, build and training services

We will build your expenditure cube by collecting and cleansing your data, work with you to develop expenditure categories meaningful to your business, we will validate your data sets with your team and we will work with your accounts payable to improve future data input, as well as train and enable your staff to maintain and manage your expenditure cube.

We can assist in project scoping, project planning, category schema development , data standardisation and enrichment from multiple systems and sources, pilot cube testing, bespoke dashboard development, communications and system and data analysis training.

We can support you in the development of your future data roadmap and roadmaps to align business objectives.

think customers

think analytics services helps accelerate time and value, mitigate risk to achieve better ROI.

We assist and enable think customers to harness the power of the think platform's Business Intelligence capabilities.

think analytics can assist with structuring your data, introduce new design enhancements to enrich your data, establish visualisation and develop dashboards reflecting the status of your KPI's.

Develop insightful reports tailored to your business needs, provide training to enable you to get the most out of your think platform analytics experience.

Our support services are a subscription based service.

Analytics bureau for procurement functions

think analytics; providing support for all facets of your procurement team's category management and business reporting needs. Giving them opportunity to work on the business, developing strategy and interacting with the market.

think analytics can support your procurement function in strategic planning, supplier benchmarking, vendor reporting and performance analysis. As well as assisting with risk and governance analysis, we can analyse and identify opportunities and discuss these in person.

The analytics bureau is available on a project basis or as a subscription service.

Analytics bureau for 3rd party consultancies

think analytics provides analytics bureau services to 3rd party consultancies on a sub contractor basis.

We offer consultancies the ability to add additional service offerings to their product portfolio, not carry additional resource overheads, leverage off advanced analytical skill sets, free up time to grow their business, and dedicate more time to existing projects to deliver a better quality outcome.

By engaging think analytics you can provide a sense of assurance, improve data quality and integrity, which could previously have been lost, due to time constraints and can assist in expanding on scope .

Our bureau service is available as a subscription service or project based service.

Stand alone expenditure cubes

For customers wanting a stand alone cube we recommend a powerful product called BIQ which is quick and easy to deploy, not resource intensive in terms of infrastructure and people, and can work with millions of lines of expenditure data from your ERP – proven with the NSW Government.

BIQ is an OLAP-powered platform with a difference: its technology allows for on-the-fly changes to categories, measures, and data schema for datasets that number in the hundreds of millions of lines. Changes to a category are instantly reflected in the entire dataset and every rollup.

Best of all no matter the size of your expenditure analysis requirement, BIQ is inexpensive and easy to deploy compared to other products on the market.

EIQ is an advanced visualisation suite which coupled with the BIQ data engine provides executive-level awareness of new savings opportunities and expenditure optimisation.

Expenditure cube support services

think analytics is an enabler of businesses, providing ground support for think, BIQ and EIQ customers across the APAC region. Assisting with day to day requirements, system enhancements, BIQ design element issues, system migration preparation to EIQ, and outsourced cube maintenance and training.

If resourcing is a factor, **think analytics** can prepare, load, commoditise your data around your specifications, manage, analysis and identify opportunities and then present them on a periodical bases.
